PROJECT

Project 1: To-Do List App

Jul 2024

- A personal project built to target a personal need. You log in with your name, type a to-do item, and hit enter. The item is then displayed and can be struck through or deleted. This app was built with HTML, CSS, and JavaScript.

Project 2: My Portfolio

Jun 2024

- A personal project built to showcase what I have been learning and what I have built throughout my learning journey. This portfolio was built with HTML, CSS, and JavaScript.

Project 3: Smart-Brain (Face Recognition App)

May 2024

- A ZTM course app built using React, combining front-end, back-end and database knowledge to detect faces in images uploaded via a URL.

Project 4: Robofriends

Apr 2024

- A dynamic React app built through the ZTM course, that allows you to search through a collection of robots.

Project 5: Background Generator

Mar 2024

- An HTML, CSS, and JS app that can be used as a color-picker, giving you a visual, rgb and hex representation of the colors chosen for a gradient background.
